

CSG2A3

ALGORITMA dan STRUKTUR DATA

Single Linked List

Insertion and Deletion

Inserting new Element

▶ **Insert first**

- New element became the first element of the list

▶ **Insert last**

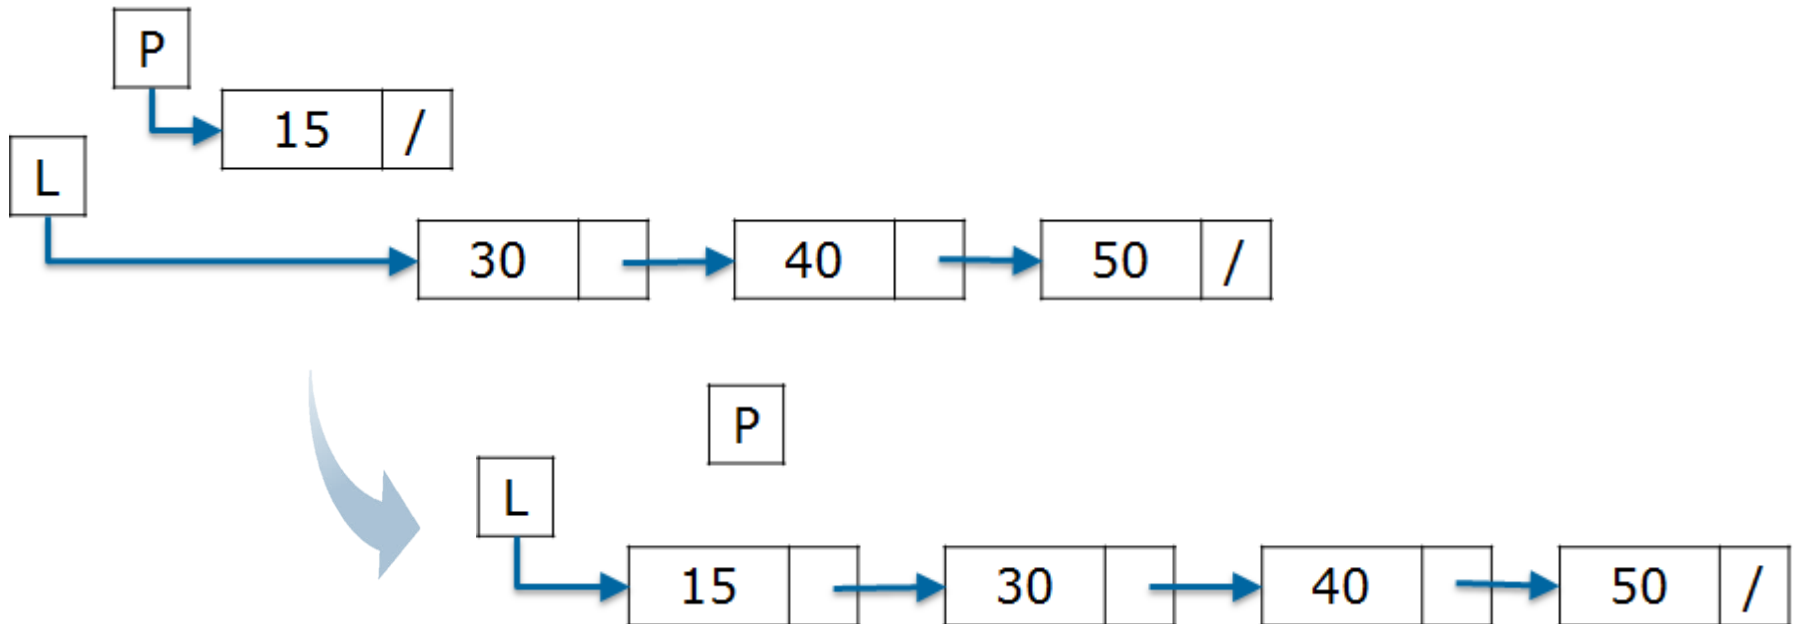

- New element became the last element of the list

▶ **Insert after / Insert before**

- Put the element somewhere in the middle

Insert First

- Insert element P into List L so that P become the first element of L

Insert First

Algorithm

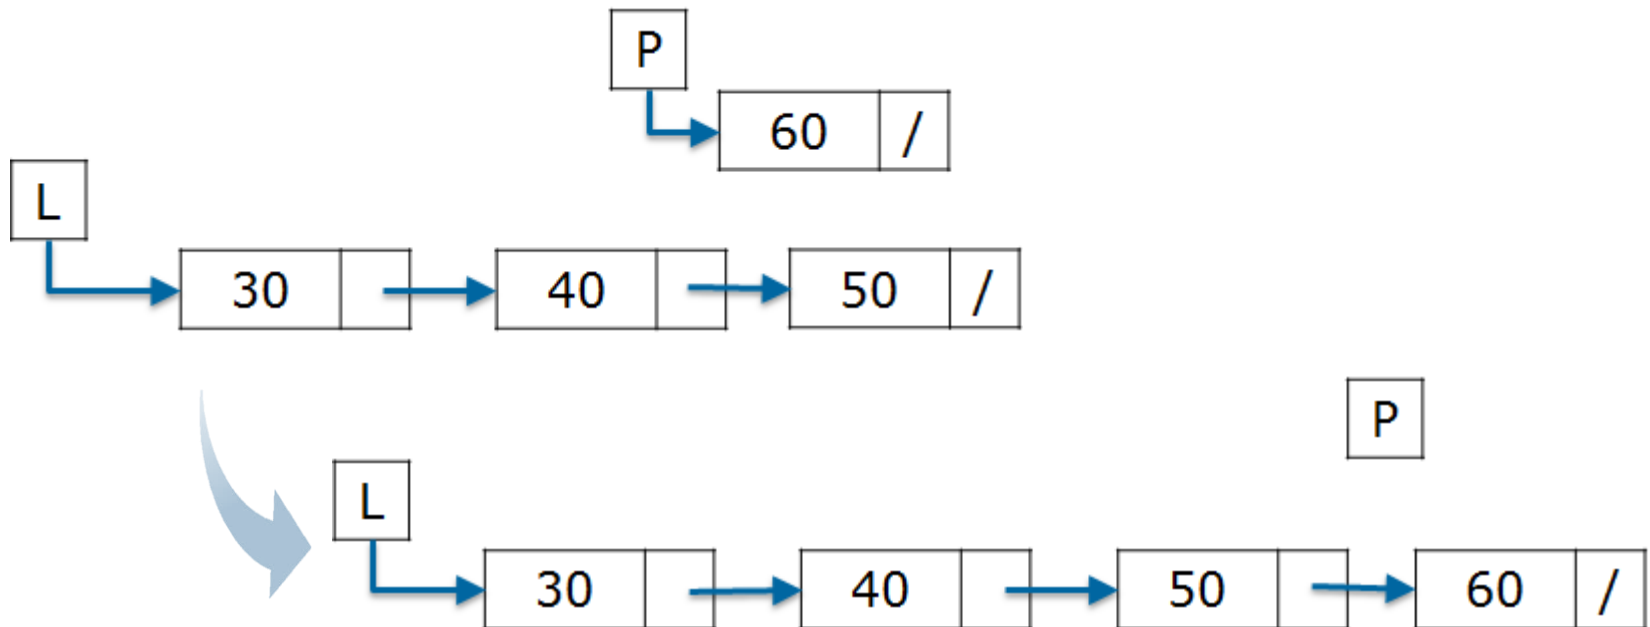

$\text{next}(P) \leftarrow \text{first}(L)$

$\text{first}(L) \leftarrow P$

Insert Last

- Insert element P into List L so that P become the last element of L

Insert Last

Dictionary

Q : address

Algorithm

$Q \leftarrow \text{first}(L)$

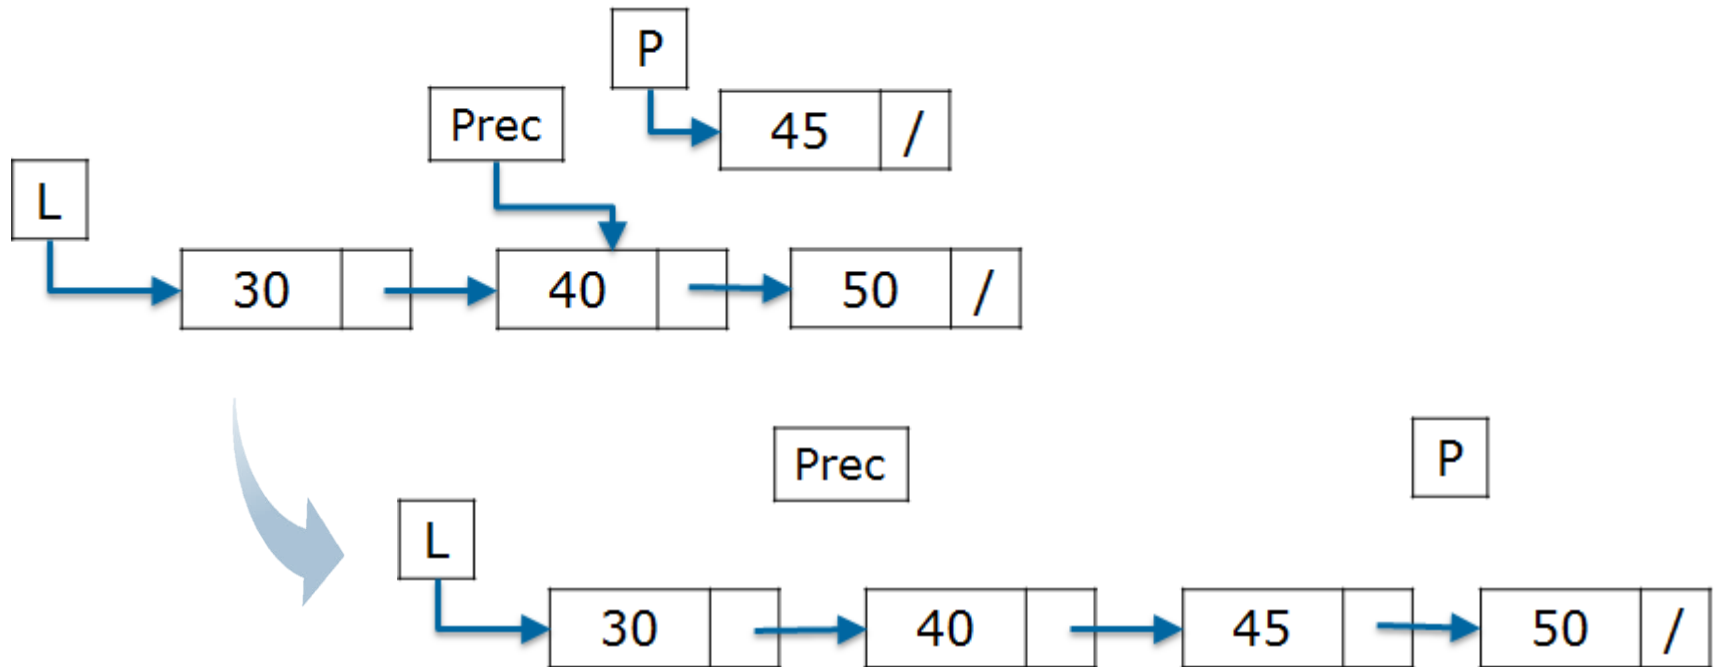

/* create a mechanism so that Q
points the last element
(gunakan loop sampai next=null)*/

$\text{next}(Q) \leftarrow P$

Insert After

- Insert element P into List L so that P become the next element of Prec

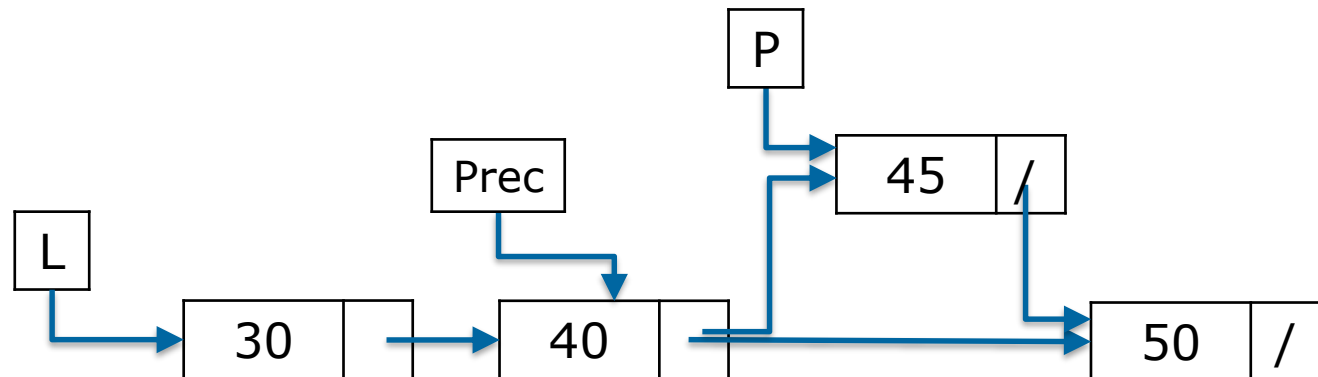

Insert After

Algorithm

$\text{next}(P) \leftarrow \text{next}(\text{Prec})$

$\text{next}(\text{Prec}) \leftarrow P$

Deleting the Element

▶ **Delete first**

- Remove the first element of the list

▶ **Delete last**

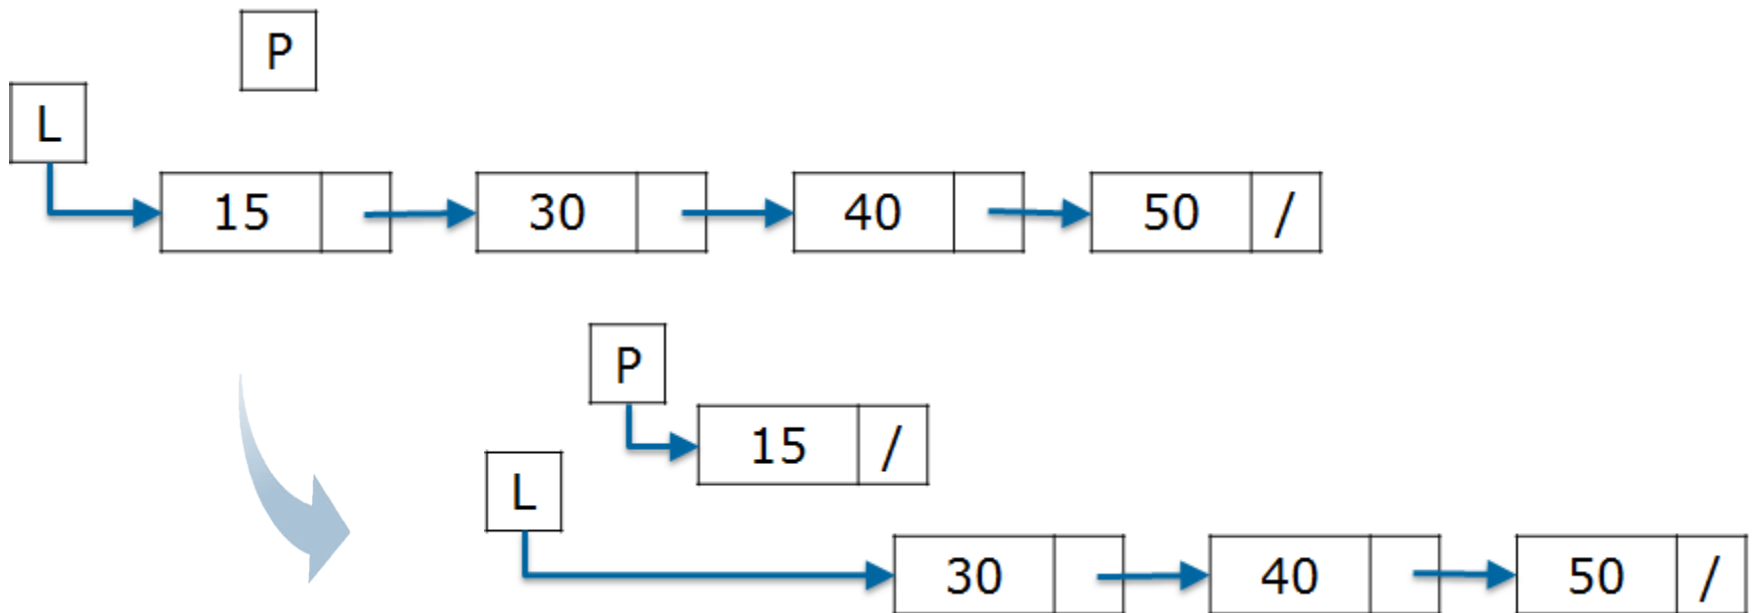

- Remove the last element of the list

▶ **Delete after**

- Remove an element next to a particular element

Delete First

- Remove the first element of L

Delete First

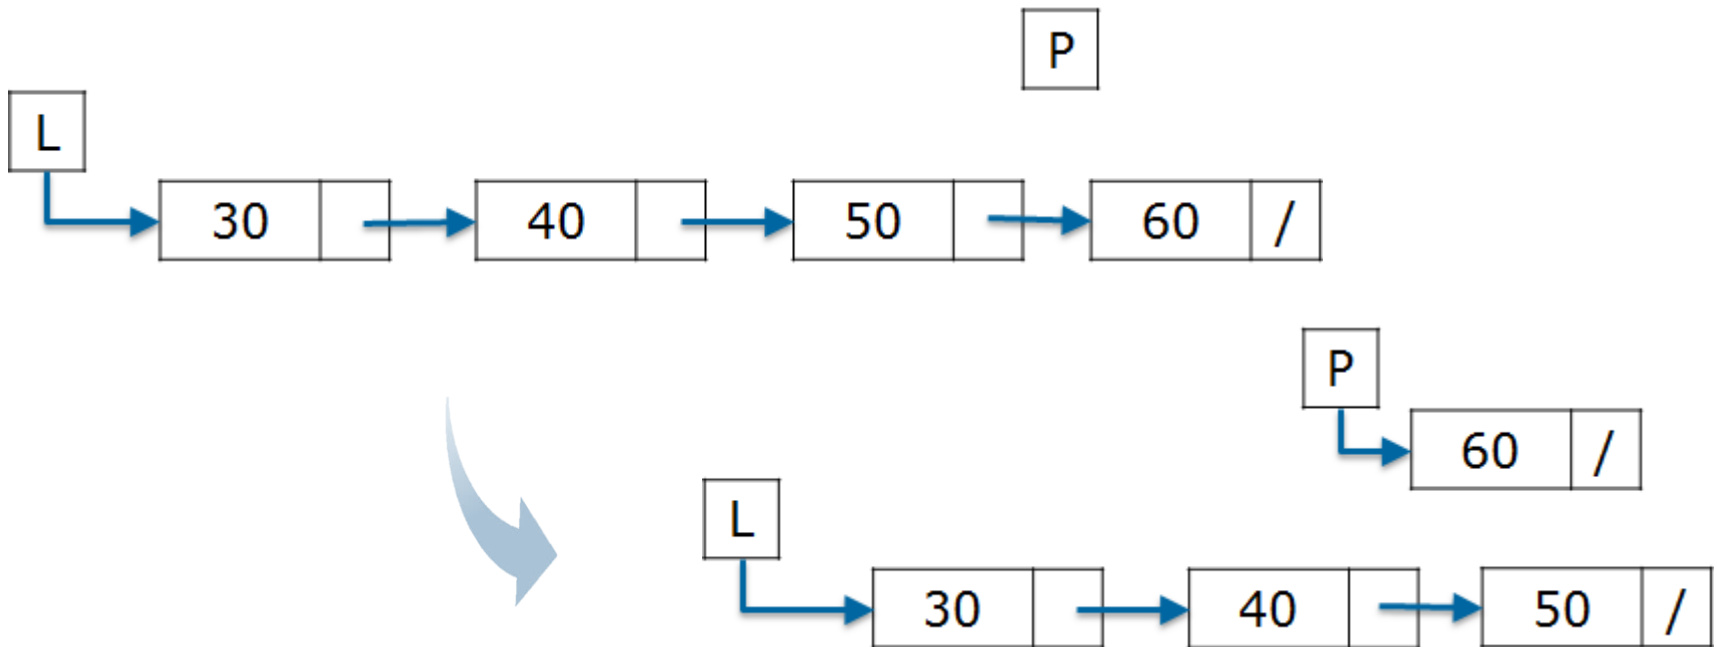

Algorithm

```
P ← first(L)  
first(L) ← next(P)  
next(P) ← Nil
```

→ P

Delete Last

- Remove the last element of L

Delete Last

Dictionary

Q : address

Algorithm

$Q \leftarrow \text{first}(L)$

/ create a mechanism so that Q points
the element **before** the last element */*

$P \leftarrow \text{next}(Q)$

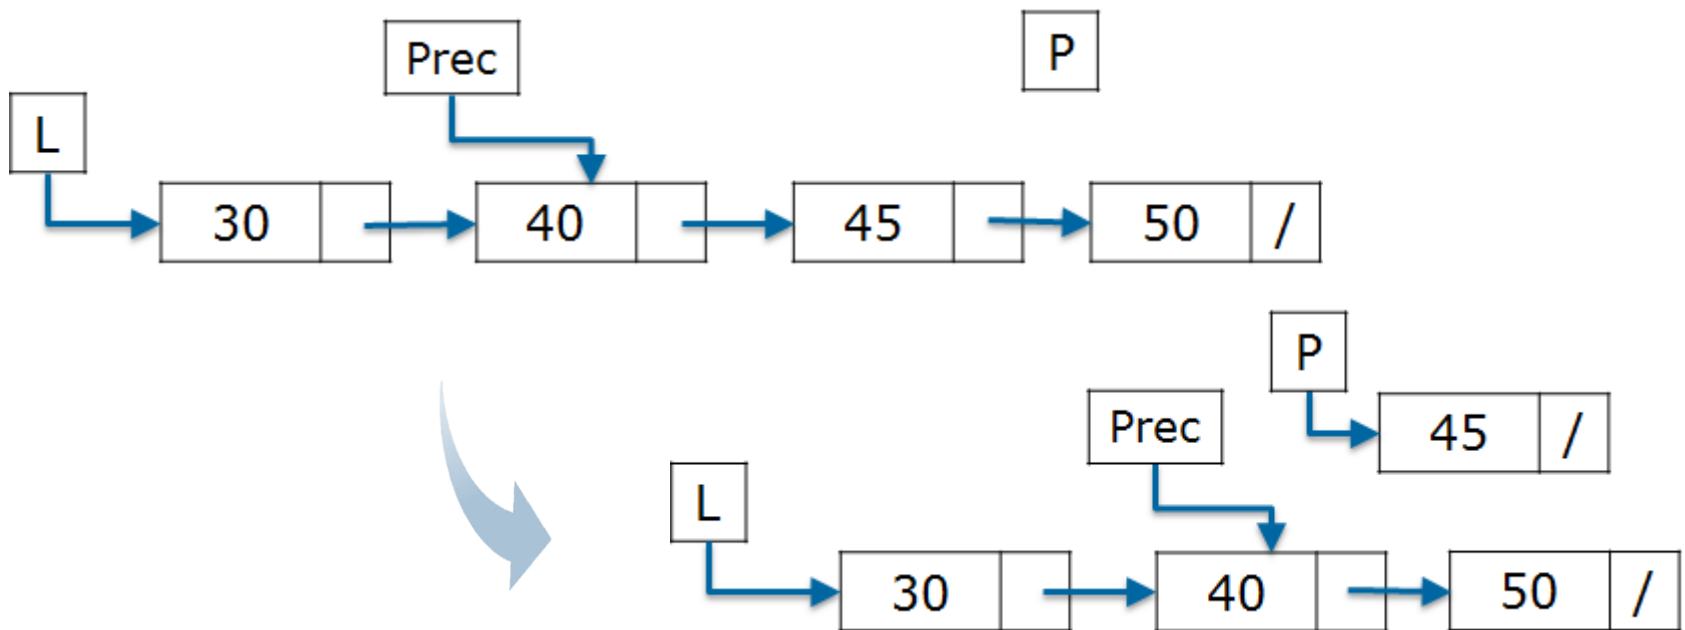

$\text{next}(Q) \leftarrow \text{Nil}$

→ P

Delete After

- Remove element after the element pointed by Prec

Delete After

Algorithm

```
P ← next (Prec)
next(Prec) ← next(P)
next(P) ← Nil
```

→ P

Mind the special conditions

- ▶ Empty list
- ▶ Only 1 element in list
